** Annualized = Claim Cost / Number of Months in Report * 12

* Enrollment is based on CARRIER'S CENSUS RULE

ENDING DATE/TIME: 3/02/2026 8:59:52

Shock Claimants - Reporting Period May 2025 to Jan 2026

Population: HIGHLAND COMPUTER FORMS

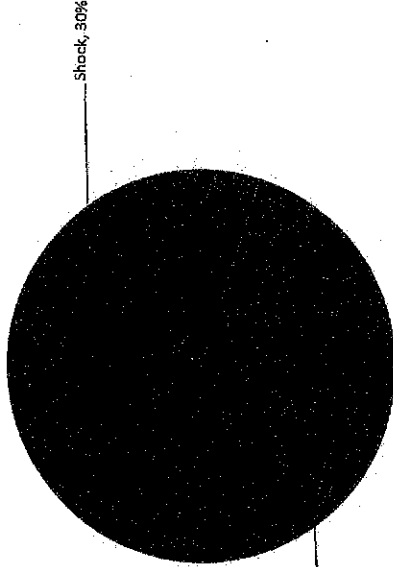

The shock claimants listed represent every plan member who incurred medical and pharmacy costs totaling 50% or more of the Specific Deductible, or in this case, \$35,000.00+. These costs can fluctuate from year to year and cannot necessarily be controlled through plan changes.

The concurrent model uses a given year claim data to calculate the individual risk scores for the same time period. Each risk score is a measurement of what an individual's assessment period risk typically would be, based on his or her condition profile, when compared to the average MARA calibration population. The concurrent risk score is used as an explanatory tool to identify the Expected level of a given year's healthcare expenditures, which are known (actual costs).

The prospective model utilizes medical claim history from the assessment period to predict risk scores for each individual for a subsequent time period. The risk scores represent the predicted health status for a 12-month projection period. The MARA prospective model forecasts risk for the 12-month period immediately following the end of the report period.

Shock vs. Non-Shock Claimants, Total Medical and Pharmacy Paid

Threshold Amount	\$35,000
Shock Claimants Paid	1
MedRx Paid Shock Claimants	\$91,730
MedRx Paid Others	\$218,106

Current Status	Relationship	Member Gender	Age	Concurrent Risk	Prospective Risk	Overall Care Alert Score	Medical Paid	Pharmacy Paid	MedRx Paid	Highest Paid Medical Diagnosis	Drx Paid Amount
