Shock Claimants - Reporting Period  
May 2024 to Jan 2025

Population: HIGHLAND COMPUTER FORMS

The shock claimants listed represent every plan member who incurred medical and pharmacy costs totaling 50% or more of the Specific Deductible, or in this case, \$35,000.00+. These costs can fluctuate from year to year and cannot necessarily be controlled through plan changes.

The concurrent model uses a given year claim data to calculate the individual risk scores for the same time period. Each risk score is a measurement of what an individual's assessment period risk typically would be, based on his or her condition profile, when compared to the average MARA calibration population. The concurrent risk score is used as an explanatory tool to identify the Expected level of a given year's healthcare expenditures, which are known (actual costs).

The prospective model utilizes medical claim history from the assessment period to predict risk scores for each individual for a subsequent time period. The risk scores represent the predicted health status for a 12-month projection period. The MARA prospective model forecasts risk for the 12-month period immediately following the end of the report period.

Shock vs. Non-Shock Claimants, Total Medical and Pharmacy Paid

|                               |           |
